OpenUA Server

The system allows analysts to search for information in databases and other information sources of the enterprise, and display the obtained data in the diagrams form, for further analysis, enrichment, and the result of investigations visual presentation using i2 Analyst's Notebook.

The search is performed directly from the interface of i2 Analyst's Notebook interface, using the i2 OpenUA Search plugin. The plug-in transmits search queries to the OpenUA Server web application, which converts them into database commands, executes these commands, and transmits the received information for image on i2 Analyst's Notebook schemas.

Increased search capabilities are provided by flexible server settings that allow you to generate commands for different database systems, different complexity levels, and execute them on multiple sources at the same time. The required access level is provided by the server integration with the corporate security system. A user actions log is being.

Conceptual scheme of i2 visual analysis system with OpenUA Server
